

# Make a Mini Greenhouse at Home!

**You will need:**

2 empty 2-liter plastic bottles  
Scissors or knife  
Potting Soil  
Sand  
Seeds  
Water

**Step 1:**

Remove the labels from the clean bottles.

---

**Step 2:**

Have a parent or adult cut the tops off the bottles with a knife or utility scissors. Recycle the tops - you will only need the bottom of the bottles for the project.

---

**Step 3:**

Add a moist mix of sand and potting soil to the bottom parts of the bottles; plant 5-10 seeds in the soil.

***Step 4:***

Paste the two halves together, fitting one on top of another.

---

***Step 5:***

Put the greenhouse in a sunny area (a window sill). Wait for the seeds to grow and plant them in a garden when they are ready.
